
Instruction Sets: Addressing Modes and Formats

Addressing Modes

- Immediate
- Direct
- Indirect
- Register
- Register Indirect
- Displacement (Indexed)
- Stack

Example Register Organizations

Data Registers	
D0	
D1	
D2	
D3	
D4	
D5	
D6	
D7	

Address Registers	
A0	
A1	
A2	
A3	
A4	
A5	
A6	
A7	
A7'	

Program Status	
Program Counter	
Status Register	

(a) MC68000

General Registers

AX	Accumulator
BX	Base
CX	Count
DX	Data

Pointer & Index

SP	Stack Pointer
BP	Base Pointer
SI	Source Index
DI	Dest Index

Segment

CS	Code
DS	Data
SS	Stack
ES	Extra

Program Status

Instr Ptr
Flags

(b) 8086

General Registers

EAX	AX
EBX	BX
ECX	CX
EDX	DX

ESP	SP
EBP	BP
ESI	SI
EDI	DI

Program Status

FLAGS Register
Instruction Pointer

(c) 80386 - Pentium II

Immediate Addressing

- Operand is part of instruction
- Operand = address field
- e.g. ADD 5
 - Add 5 to contents of accumulator
 - 5 is operand
- No memory reference to fetch data
- Fast
- Limited range

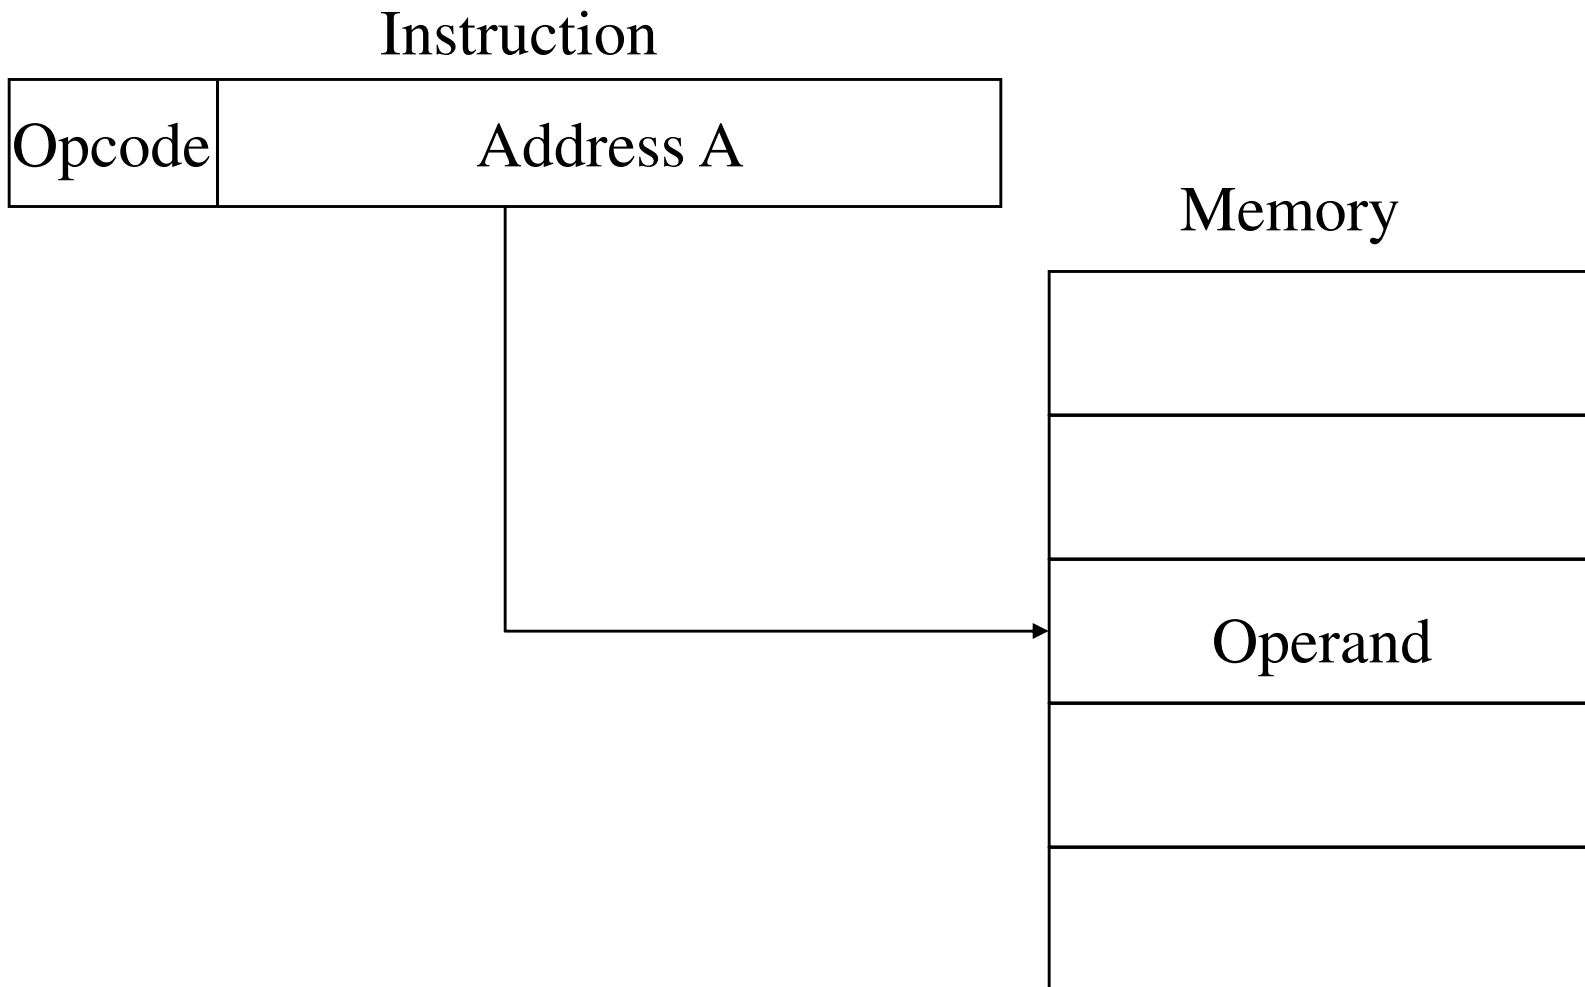

Immediate Addressing Diagram

Direct Addressing

- Address field contains address of operand
- Effective address (EA) = address field (A)
- e.g. ADD A
 - Add contents of cell A to accumulator
 - Look in memory at address A for operand
- Single memory reference to access data
- No additional calculations to work out effective address
- Limited address space

Direct Addressing Diagram

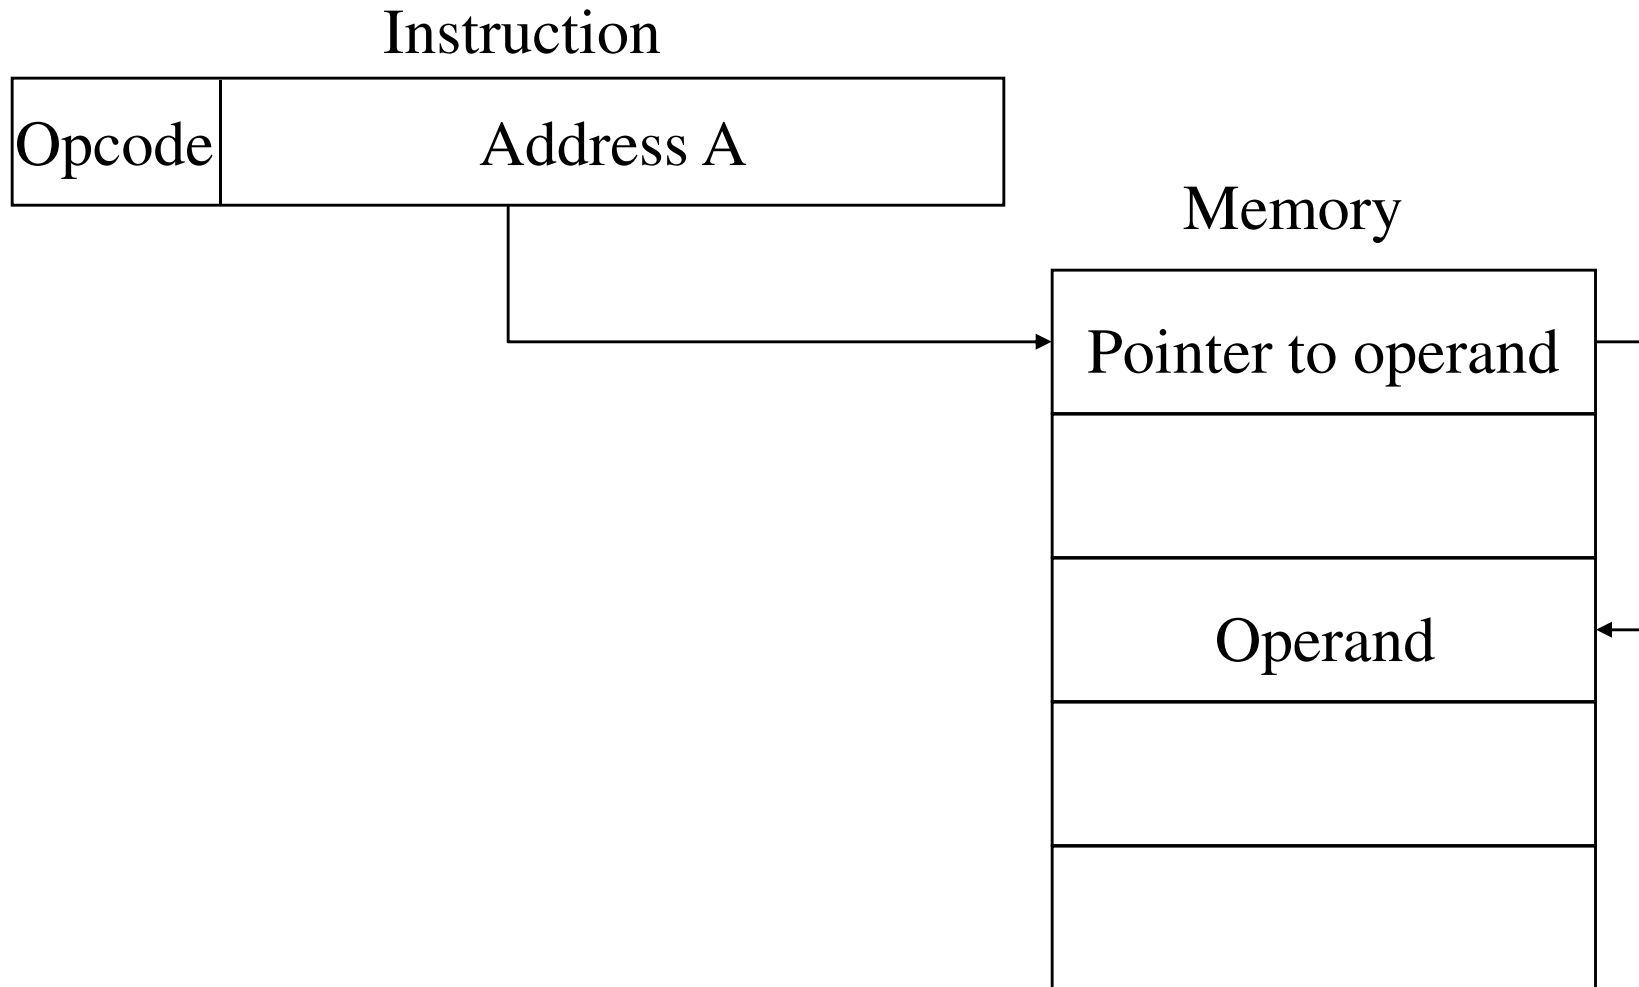

Indirect Addressing (1)

- Memory cell pointed to by address field contains the address of (pointer to) the operand
- $EA = (A)$
 - Look in A, find address (A) and look there for operand
- e.g. ADD (A)
 - Add contents of cell pointed to by contents of A to accumulator

Indirect Addressing (2)

- Large address space
- 2^n where n = word length
- May be nested, multilevel, cascaded
 - e.g. $EA = (((A)))$
- Multiple memory accesses to find operand
- Hence slower

Indirect Addressing Diagram

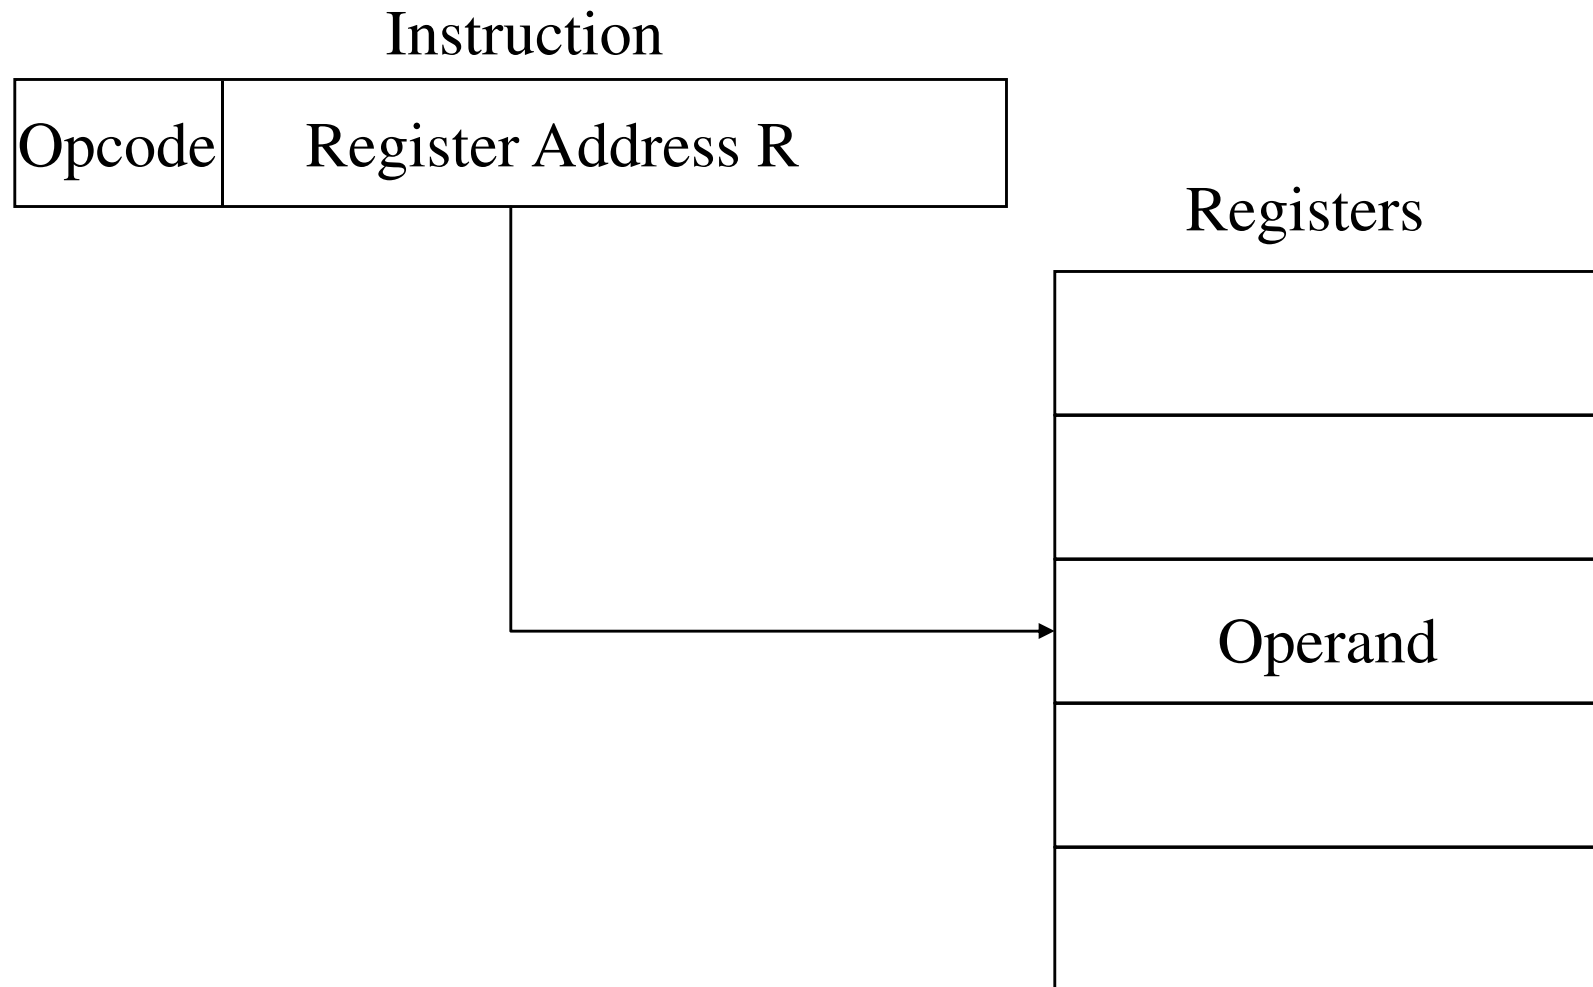

Register Addressing (1)

- Operand is held in register named in address field
- $EA = R$
- Limited number of registers
- Very small address field needed
 - Shorter instructions
 - Faster instruction fetch

Register Addressing (2)

- No memory access
- Very fast execution
- Very limited address space
- Multiple registers helps performance
 - Requires good assembly programming or compiler writing
 - N.B. C programming
 - register int a;
- c.f. Direct addressing

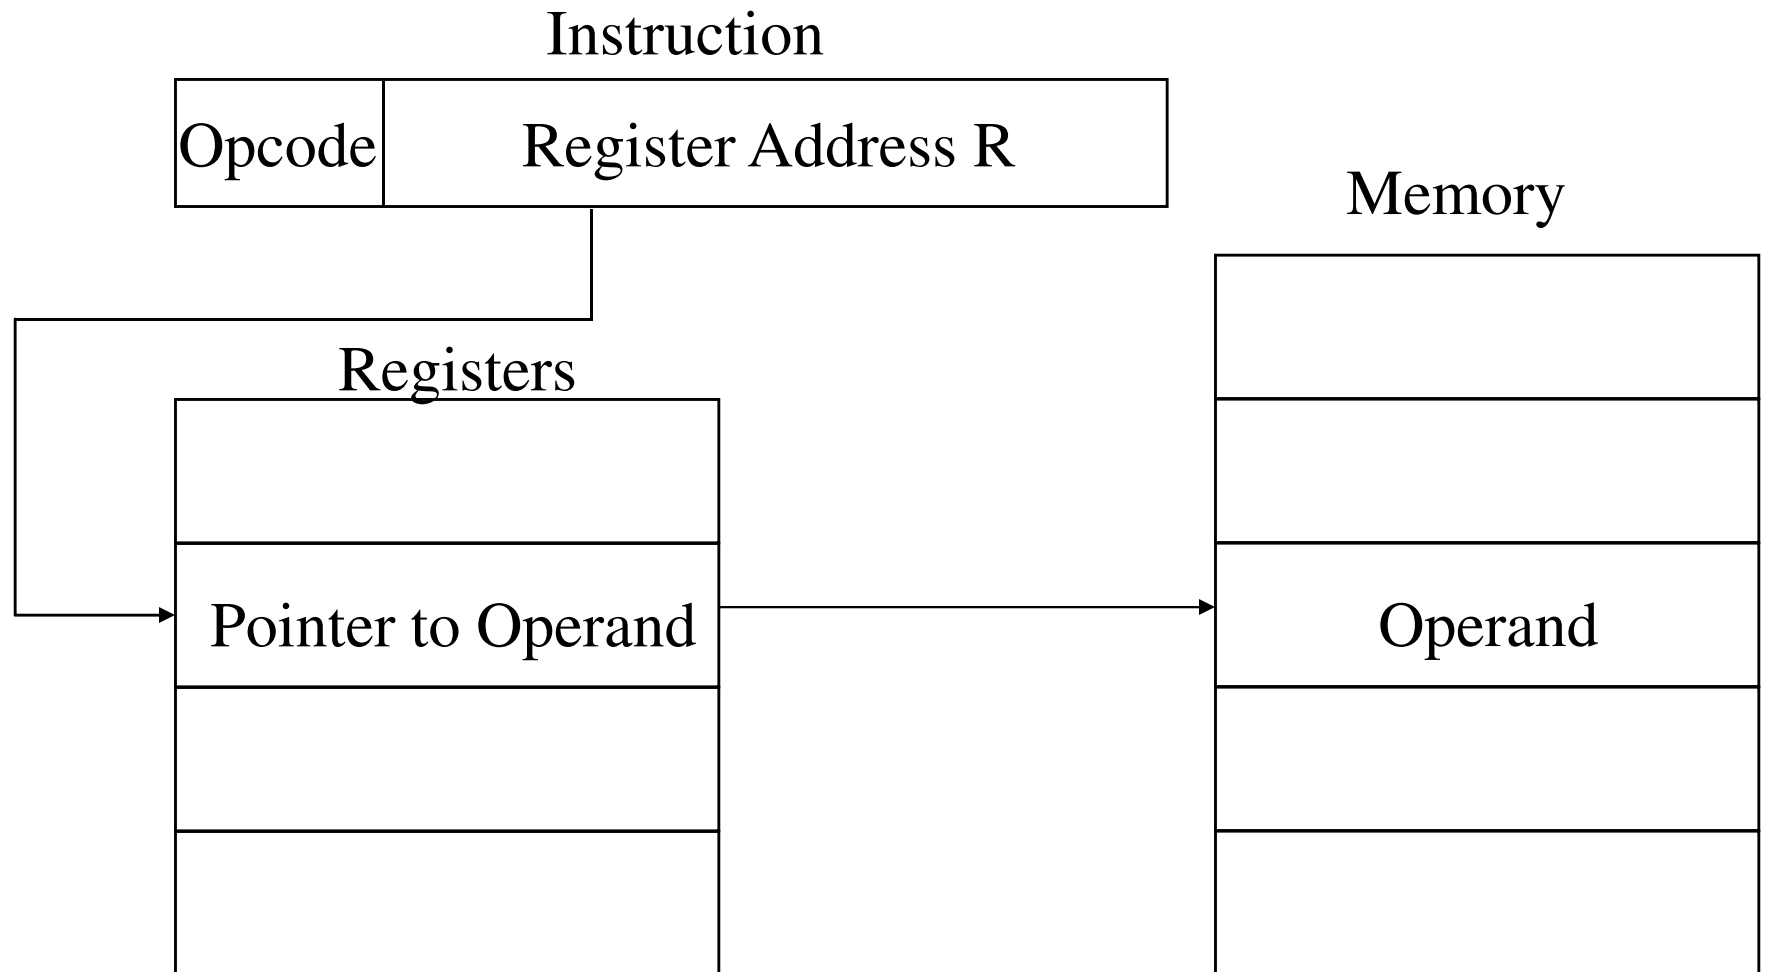

Register Addressing Diagram

Register Indirect Addressing

- C.f. indirect addressing
- $EA = (R)$
- Operand is in memory cell pointed to by contents of register R
- Large address space (2^n)
- One fewer memory access than indirect addressing

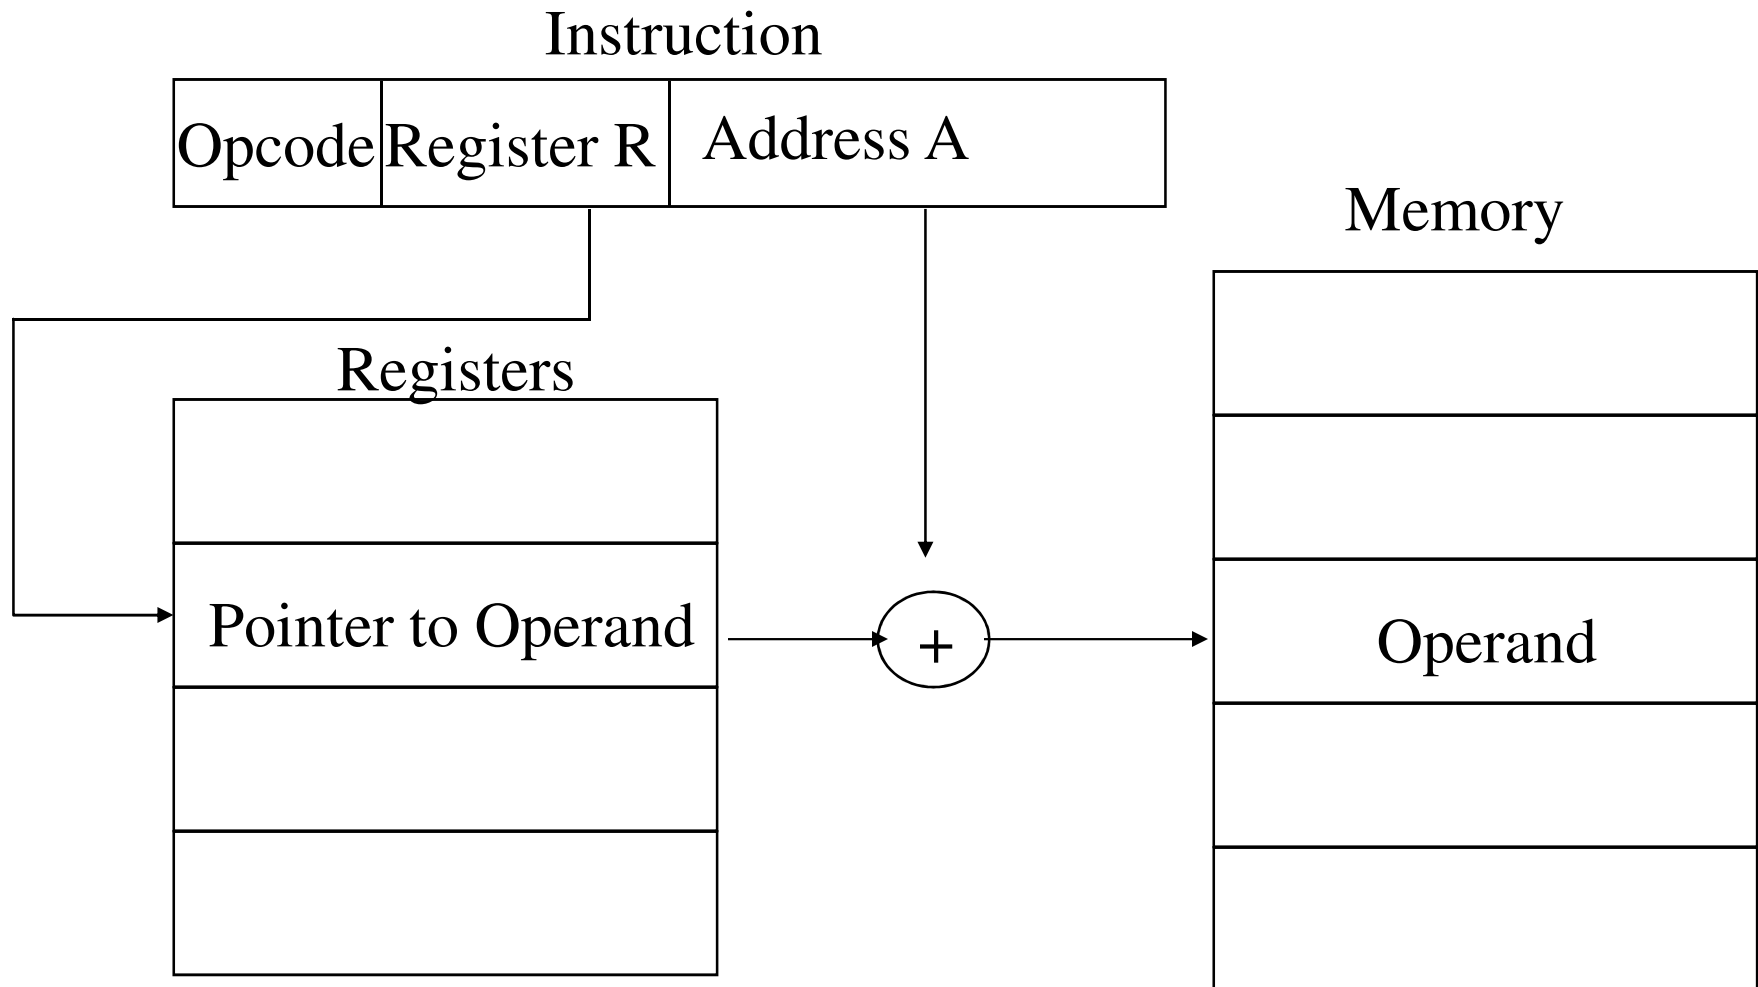

Register Indirect Addressing Diagram

Displacement Addressing

- $EA = A + (R)$
- Address field hold two values
 - A = base value
 - R = register that holds displacement
 - or vice versa

Displacement Addressing Diagram

Relative Addressing

- A version of displacement addressing
- $R = \text{Program counter, PC}$
- $EA = A + (PC)$
- i.e. get operand from A cells from current location pointed to by PC
- c.f locality of reference & cache usage

Base-Register Addressing

- A holds displacement
- R holds pointer to base address
- R may be explicit or implicit
- e.g. segment registers in 80x86

Indexed Addressing

- $A = \text{base}$
- $R = \text{displacement}$
- $EA = A + R$
- Good for accessing arrays
 - $EA = A + R$
 - $R++$

Combinations

- Postindex: indexing is performed after the indirection
 - $EA = (A) + (R)$
- Preindex: indexing is performed before the indirection
 - $EA = (A + (R))$
- Autoindexing
 - $EA = A + (R)$
 - $(R) = (R) + 1$

Stack Addressing

- Operand is (implicitly) on top of stack
- e.g.
 - ADD Pop top two items from stack and add

Instruction Formats

- Layout of bits in an instruction
- Includes opcode
- Includes (implicit or explicit) operand(s)
- Usually more than one instruction format in an instruction set

Instruction Length

- Affected by and affects:
 - Memory size
 - Memory organization
 - Bus structure
 - CPU complexity
 - CPU speed
- Trade off between powerful instruction repertoire and saving space

Allocation of Bits

- Number of addressing modes
- Number of operands
- Register versus memory
- Number of register sets
- Address range
- Address granularity
